## FOREWORD

This condensed catalog has been compiled for those in the engineering field who seek the proper tubes to suit their applications.

It is also intended to serve as a quick reference tube guide for initial equipment as well as for replacement purposes.

More detailed data sheets and brochures on the various products listed herein are available upon request. A detailed engineering transmitting, and power tube manual giving complete tube characteristics and application data is available to qualified engineers at the nominal cost of \$2.50 each. A semiconductor and special purpose tube manual is also available at \$2.50 each.

AMPEREX is always interested in quoting on all tube requirements. Our research, development and manufacturing facilities are such that we welcome inquiries on new products.

AMPEREX ELECTRONIC CORPORATION

# INDEX

<u>Description</u>	<u>Page</u>
Germanium Diodes .....	22
High Fidelity Tubes .....	8
Ignitrons .....	19
Indicator Tubes .....	24
Klystrons .....	16
Magnetrons .....	14
Power Tubes, Triodes, Tetrodes & Pentodes .....	2 thru 7
Premium Quality 10,000 Hour Tubes .....	12
Radiation Counter Tubes .....	20
Rectifiers (Tube) Diodes .....	10
Ruggedized Miniature Tubes—A.R.I.N.C. Types .....	10
Subminiature Tubes .....	8
Thyratrons—Hydrogen .....	8
Thyratrons—Mercury Vapor and Inert Gas—Triodes and Tetrodes .....	14
Transistors .....	24
Tube Accessories .....	26
UHF Triodes and Special Purpose Tubes .....	16
Vacuum Capacitors .....	18

\* Conditions given are for Audio Amplifier operation.

\*\* Grid No. 2 to Grid No. 1.

NOTE: Typical operation as R-F amplifier and oscillator Class C telegraphy,  
key down conditions per tube, without modulation for frequencies indicated.

INTERELECTRODE CAPACITANCE - $\mu\mu\text{f}$			DESCRIPTION	TYPE NO.
G-P	G-F	P-F		
2.0	6.6	0.035	Forced-air cooled triode. UHF oscillator, frequency multiplier or R-F amplifier. Suited to cavity type circuits. Features low interelectrode capacitance, high (closely controlled) transconductance and high plate dissipation. Indirectly heated, oxide coated cathode.	2C39A
0.03	15.7	4.3	Forced-air cooled external anode tetrode. Suited for high power mobile applications. Makes an excellent wide-band amplifier for video application.	4X150A
Pg. 8)				AX4-125A/4021
Pg. 8)				AX4-250A/5022
0.03	15.7	4.5	Forced-air cooled external anode tetrode. Brazed radiator. Interchangeable with 4X150A where higher plate dissipation is required.	4X250B
0.05	12.8	5.6	Forced-air cooled external anode tetrode. Useful as power amplifier in FM, TV and VHF communication transmitters.	4X500A
6.9	6.2	1.2	Radiation-cooled triode. Original Amperex design and ruggedness make it ideally suited for R-F heating as well as for broadcasters and amateurs.	HF-200
7.0	8.8	1.2	Radiation-cooled triode, similar to HF-200, with different tube capacitance. Low voltage, high current characteristics.	HF-201A
2.9	5.0	0.7	Radiation-cooled high power triode. Used in low powered A-M broadcast stations. Also in electronic heating generators.	250-TH
3.1	3.7	0.7	Radiation-cooled triode. Low mu version of 250-TH.	250-TL
7.0	6.0	1.0	Radiation-cooled triode. Ideally suited for initial equipment and replacement for competitive types. Widely used in R-F heating applications, many commercial, police, and amateur transmitters.	HF-300
5.0	8.8	0.8	Radiation-cooled triode. Very popular in A-M broadcast stations and Government transmitters. Also used in R-F heating applications.	450-TH
4.5	6.8	0.8	Radiation-cooled, medium mu version of 450-TH.	450-TL
10.0	14.0	1.3	Forced-air cooled triode. Low voltage, high current characteristics. Ideal for R-F heating. Has a thoriated-tungsten filament.	501-R/5759
10.0	14.0	1.3	Water-cooled triode. Thoriated-tungsten filament. Compactness and low voltage, high current make it ideally suitable for R-F heating.	502/5760
10.0	14.0	1.3	Forced-air version of 502.	502-R/5761
10.0	14.0	1.3	Forced-air cooled triode similar to AMPEREX 501R minus flexible leads. Interchangeable with 7026 with very minor circuit changes.	504R
17.0	26.0	2.5	Water-cooled triode. 40 kw output makes it ideally suited as high power R-F heating oscillator and R-F amplifier in A-M transmitters.	508/6246
5.8	8.5	1.2	Medium mu power triode. Amplifier, oscillator and modulator.	750TL
6.5	6.5	6.8	Radiation-cooled triode. Amperex rugged design makes it the popular choice in R-F and A-F stages of A-M broadcast stations.	805
0.2	11.0	7.0	Radiation-cooled tetrode. Popular replacement as well as for initial equipment.	807
4.8	8.7	12.0	Radiation-cooled triode. Thousands of Amperex 810's are used yearly in initial equipment and as direct replacement.	810
0.2	16.3	14.0	Radiation-cooled low drive beam tetrode. Widely used in A-M broadcasting stations, Government, and amateur service.	813
.07	Input 12 Output 14		Radiation-cooled beam pentode. Used in A-M broadcasting stations throughout world.	828
.05	Input 7.5 Output 3.8		Radiation-cooled twin tetrode. Used in mobile and shipboard transmitters, as well as other communications fields.	832-A
6.3	12.3	8.5	Radiation and forced-air cooled triode used widely in A-M transmitters and also some R-F heating applications. (Refer to AX-9902 data)	833-A
8.0	6.5	3.0	Radiation-cooled zero bias triode. Still popular in amateur, commercial and Government transmitters.	838
11.5	5.0	3.5	Radiation-cooled triode. Still popular in amateur, commercial and Government transmitters.	845*

INTERELECTRODE CAPACITANCE - $\mu\mu\text{f}$			DESCRIPTION	TYPE NO.
G-P	G-F	P-F		
33.0	11.0	2.0	Radiation and forced-air-cooled triode. Still popular as replacement in some A-M broadcast transmitters and R-F heating.	849
11.5	14.0	1.8	Same information as above. Interelectrode capacitance different.	849-A
26.0	29.0	2.6	Water-cooled triode. This rugged "powerhouse" very popular in broadcasting stations and ideal for R-F heating applications.	880
17.8	19.5	3.0	Water-cooled triode. Another rugged high power R-F tube for broadcasting stations and R-F heating applications.	889-A
20.7	19.5	3.0	Forced-air-cooled triode version of 889-A, with improved radiator design.	889-RA
28.0	16.0	3.0	Water-cooled triode. This is one of the tubes that built Amperex reputation. Used in 5 and 10 kw broadcasting stations. Also popular in R-F heating.	891
30.0	16.0	3.0	Forced-air-cooled version of 891.	891-R
32.0	17.0	1.8	Water-cooled triode. Widely used all over the world in broadcasting stations. Also another ideal R-F heating tube.	892
32.0	17.0	2.0	Forced-air-cooled version of 892.	892-R
10.0	13.0	2.0	Forced-air-cooled triode. Original Amperex design. 5.8 kw output at 10 mc with zero bias. Used principally in broadcasting.	ZB-3200
25.0	30.0	1.25	Forced-air-cooled triode. Ideal oscillator for R-F heating and broadcast service.	5604
24.0	30.0	1.0	Water-cooled version of 5604.	5619
24.0	39.0	2.5	Industrial water-cooled version of type 880	5658
18.0	23.5	2.6	Water-cooled triode. Heavy duty version of 889-A for industrial R-F heating application.	5666
18.5	23.5	3.0	Forced-air cooled triode. Heavy duty version of 889-RA for industrial R-F heating application.	5667
14.5	17.5	0.5	Thoriated tungsten filament power triode, Modulator, amplifier or oscillator for H.F. transmitters and R.F. power amplifier in wide-band TV service.	5736
24.5	47.0	3.0	Improved version of 880 with thoriated tungsten filament for high emission capability and a saving of 70% in filament power. Has rugged Kovar grid and filament seals. For industrial & communication applications.	5771
5.5	5.8	0.1	Radiation and/or forced-air-cooled H.F. triode of original Amperex design. Powdered glass dish-type base with extremely low lead inductance makes this tube ideally suited for almost any H-F application.	5866/AX-9900
5.3	7.0	0.15	Radiation and/or forced-air-cooled H.F. low drive triode of original Amperex design.	5867/AX-9901
8.0	11.0	0.35	Radiation and/or forced-air-cooled H-F triode with rugged 100 watt filament. Of original Amperex design, for all heavy duty R-F applications.	5868/AX-9902
0.08	Input 6.7 Output 2.1 (Push-Pull)		Radiation and/or forced-air-cooled twin-tetrode of original Amperex design as H-F version of conventional 829-B. Makes ideal multiplier, as well as straight amplifier and modulator.	5894
11.0	16.0	0.3	Water-cooled low drive H.F. triode. Rugged for H.F. heating application.	5923/AX-9904
11.0	16.0	0.3	Forced-air cooled version of type 5923.	5924/AX-9904-R
11.0	16.0	0.3	Forced-air cooled triode for FM & TV transmitters. Brazed radiator shell & external surfaces silverplated throughout.	5924A
	24.0 24.0	8.5 8.5	Water-cooled low drive, H-F tetrode designed for F-M and television transmitter power amplifier.	6075/AX-9907
0.2 0.2	24.0 24.0	8.5 8.5	Forced-air-cooled external anode version of 6075/AX-9907	6076/AX-9907-R
6.0	116.0	3.4	Water-cooled triode, thoriated-tungsten filament. Designed for high power communication and industrial R-F heating services.	6077/AX-9906
86.0	116.0	3.4	Forced-air-cooled version of 6077/AX-9906. Improved radiator with unique air flow chamber design for minimum air flow requirements. Highest power air cooled tube in the world.	6078/AX-9906-R
0.24	Input 25 Output 7.2		Radiation and/or forced-air-cooled low drive H-F tetrode for F-M and A-M transmitters. Also ideal in screen modulator stages.	6079/AX-9908

† Derated for 155 watts output

+ 50% duty cycle

NOTE: Typical operation as R-F amplifier and oscillator Class C telegraphy,  
key down conditions per tube, without modulation for frequencies indicated.

INTERELECTRODE CAPACITANCE - $\mu\mu\text{f}$			DESCRIPTION	TYPE NO.
G-P	G-F	P-F		
0.1	22.5	11.0	Radiation-cooled pentode with low voltage - high current characteristics. Powder glass dish type base with short internal lead connections. Up to 150 watts, Class C telephony, ICAS.	6083/AX-9909
0.22	13.5	8.5	Beam power tube for use as R-F power amplifier, oscillator, frequency multiplier, AF power amplifier or modulator for mobile and fixed equipment. Anode capable of dissipating 25 watts ICAS.	6146
0.05	10.8	3.1	Convection and forced-air-cooled tetrode. "Magnisorb" anode and low drive make it excellent R-F amplifier tube in F.M. broadcasting. Improved version of 4-125A/4021.	6155
0.12	12.7	4.5	Convection and forced-air-cooled tetrode. "Magnisorb" anode and low drive characteristics with "sintered" glass base. Improved version of 4-250A/5022.	6156
-	Input 4.0 Output 1.3		Radiation and/or forced-air-cooled twin tetrode of Amperex design. H.F. version of conventional 832A. Makes ideal multiplier as well as straight amplifier and modulator. Useful up to 700 mc. at reduced ratings. Delivers 15 watts at 600 mc. under CCS conditions.	6252/AX-9910
32.0	17.0	1.8	Improved ruggedized version of standard 892 with spiral filament, Kovar seals, powdered glass stem. Grid side arm deleted and replaced with Kovar ring. Excellent industrial tube for heavy duty, also communication.	6333
<0.1	Input 6.2 Output 2.6		High-gain, twin tetrode for use as Class C amplifier, oscillator, frequency multiplier and modulator, ICAS plate input = 30 watts up to 200 mc. Capable of delivering 18.5 watts output at 200 mc.	6360
32.0	17.0	1.8	Forced-air-cooled version of type 6333. See above.	6445
32.0	17.0	1.8	Improved, ruggedized, heavy-wall version of type 892. Has powdered glass stem, Kovar grid ring, Kovar anode seal, stronger spiral filament giving more uniform heat distribution over anode surface. Also has strong conical, low-inductance grid support. An unusual industrial tube without equal.	6446
32.0	17.0	1.8	Forced-air-cooled version of type 6446. See above.	6447
30.0	37.0	0.5	Thoriated tungsten filamentary triode. 20 kw anode dissipation. Water-cooled. High power, low impedance, R.F. amplifier and industrial oscillator.	6617
30.0	37.0	0.5	Same as 6617 except 15 kw anode dissipation. Forced-air-cooled.	6618
47.6	25.1	1.5	Water-cooled triode with special characteristics as a low impedance. R.F. industrial oscillator. Particularly suited to induction and dielectric heating applications.	6756
50.0	25.1	2.0	Forced-air-cooled version of type 6756.	6757
26.0	25.0	1.0	Thoriated tungsten filamentary triode. 20 kw anode dissipation. Water-cooled. High power RF amplifier and industrial oscillator.	6800
27.0	25.0	1.25	Same as 6800 except 10 kw anode dissipation. Forced air-cooled.	6801
-	Input 4.0 Output 1.3		Twin tetrode, radiation-cooled. Special AMPEREX design for mobile service. HF version of conventional 832A. Ideal multiplier and straight amplifier and modulator. Useful up to 1000 mc. Delivers 15 watts at 600 mc, CCS.	6907
-	Input 3.8 Output 0.8		High-gain twin tetrode for use as Class C amplifier, oscillator, frequency multiplier and modulator. ICAS plate input = 14 watts up to 500 mc. Capable of delivering 7.5 watts output at 500 mc.	6939
11.0	16.0	0.3	Industrial water-cooled triode with large overload capacity on grid and plate currents. Suitable for 7.5 kw induction and dielectric heaters and 10 kw plastic sealers.	6960
11.0	16.0	0.3	Forced-air cooled version of 6960. Suitable for 7.5 kw induction and dielectric heaters and 10 kw plastic sealers.	6961
0.03	15.7	4.5	Forced-air cooled external anode tetrode. Brazed radiator. Interchangeable with 4X150A where higher plate dissipation is required.	6979
4.0	9.0	0.12 Max.	Compact, coaxial transmitting triode. Forced-air cooled. UHF oscillator, amplifier and frequency multiplier. Useful up to 900 mc.	7004
6.2	10.5	0.25	Radiation cooled triode for industrial oscillator and amplifier applications. Rugged construction. Graphite anode with unusual overload capability. Thoriated tungsten filament.	7092

Output-Push-Pull B	Load Resistance (K ohms)	Cut-Off <sup>c</sup> Bias (volts)	DESCRIPTION	TYPE NO.
	-	-	High gain pentode particularly suitable for preamplifier and input stages in which hum, noise and microphony must be kept to a minimum. Electrode structure rigid. Heater is bifilar, twisted pair of wires with magnetic field of one opposed to that of the other.	EF86/6267
	-	-12.0	Medium-gain dual triode with low hum, noise and microphonics. Replaces the 12AT7 without circuit changes.	ECC81/12AT7
	-	-	Low noise dual triode with low hum, noise and microphonics. Replaces the 12AU7 without circuit changes.	ECC82/12AU7
	-	-	High-gain dual triode with low hum, noise and microphonics. Replaces the 12AX7 without circuit changes.	ECC83/12AX7
	-	-	Twin triode specifically designed for use in "front-end" stages of FM receivers as a combined RF Amplifier and self-oscillating additive mixer. Features extensive internal screening between the two triodes which reduces oscillator radiation. The high mutual conductance, input resistance and amplification factor make possible an average overall "front-end" gain of 350.	ECC85/6AQ8
	-	-		
	8 Plate-to-Plate	-	High quality pentodes designed especially for high fidelity audio systems. High efficiency with low distortion. High sensitivity. Exceedingly small spread in characteristics between individual tubes so that maximum rated output is obtained with all tubes.	EL84/6BQ5
	11 Plate-to-Plate	-		6CA7/EL34
300 volts mA μf volts dc			Indirectly heated, full-wave rectifier with 90 mA output capacity and 9 pin miniature construction.	EZ80/6V4
350 volts mA μf volts dc			Indirectly heated, full-wave rectifier with 6.3 volt, 1 amp heater, 150 mA output capacity and 9 pin miniature construction.	EZ81/6CA4
550 volts mA μf volts dc			Indirectly heated, full-wave rectifier with 5.0 volt, 1.9 amp heater and 250 mA output capacity. Octal base.	GZ34/5AR4

DESCRIPTION	TYPE NO.
These tubes are used as drivers for pulsing magnetrons and other oscillators and as high speed switches. Hydrogen-filled, they have extremely low de-ionization time. They are zero bias tubes, triggered by a positive grid pulse. Maximum pulse repetition frequency (prf in pulses per second) will depend on the peak forward anode voltage (epy in volts) according to formula: $(epy)^2 \times (prf) = 2.6 \times 10^{11} \text{ max.}$	
Completely interchangeable with 4C35 in every respect except that it has self-contained source of hydrogen providing life expectancy of minimum 1000 hours.	6268/AX-9911
Completely interchangeable with 5C22 in every respect except that it has self-contained source of hydrogen providing life expectancy of minimum 1000 hours.	6279/AX-9912

Trans-conductance Micromhos	Output Milliwatts	DESCRIPTION	TYPE NO.
420	6	Radiation-cooled pentode output amplifier for hearing aids and other purposes, where small size, light weight and low battery drain are important. An ideal tube for receivers, etc.	6007/5913
100	2.25	Same as above except this tube is a voltage amplifier.	6008/5911

Temperature Range °C		DESCRIPTION	TYPE NO.
Ambient	Mercury		
-	-	Xenon gas filled half-wave rectifier with wider temperature ranges than mercury-vapor tubes. Used largely by armed services to replace 866-A's.	3B-28
-	-	Xenon gas filled half-wave rectifier with wider temperature ranges than mercury-vapor tubes. Used largely by armed services to replace 872-A's.	4B-32
-	+25 to +70°	Convection-cooled mercury-vapor half-wave rectifier. Used in most Western Electric r-f equipment.	249-B
-	+20 to +50°	Convection-cooled mercury-vapor half-wave rectifier. Widely used in broadcast and industrial power supplies.	575-A
-	+20 to +50°	Convection-cooled mercury-vapor half-wave rectifier. Popular in high voltage and current applications.	673
-	+30 to +40°	Mercury-vapor half-wave rectifier with low voltage drop. Extremely popular in most high power broadcasting stations. Convection cooled.	857-B
-	+25 to +70°	Mercury-vapor half-wave rectifier of Amperex own design. More rugged trouble-free operation at only slight additional cost. Convection cooled.	866-AX
-	+30 to +40°	Mercury-vapor half-wave rectifier and probably the most popular intermediate high voltage tube in use today with broadcasters and industrial users. Convection cooled.	869-B
-	+30 to +40°	Electrically same as 869-B. Base has flexible filament leads with spade lugs for better, low-resistance contact with socket.	869-BL
-	+20 to +60°	Mercury-vapor half-wave rectifier. Universally used by almost every user and designer of H-V equipment. Convection cooled.	872-AX
-65 to +165°	-	High vacuum clipper diode and rectifier. Miniature version of 3B29 for liquid immersion cooling or air operation.	6339
TION	-		
-55 to +85°	-		
-	+25 to +45°	Mercury vapor rectifier for relatively high voltage and current. A high quality, long-life tube priced lower than any tube in its class on the market.	6508
+15 to +55°	+25 to +75°	Single-anode, mercury vapor rectifier with ratings, intermediate between standard types 575A and 869B. Delivers 9 amps up to 12 KV in a full wave, 3 phase power supply. Three tubes in a three phase half-wave power supply deliver 6 KV at 9 amps using only one filament transformer. Has large contact area, industrial base preventing base contact oxidation. Priced low for replacement market and original equipment.	6693
+15 to +35°	+25 to +55°		
+15 to +35°	+25 to +55°	Single anode, mercury vapor, high voltage rectifier. Plate current ratings intermediate between types 575A and 6693. Cathode and anode design similar to 6693 but with 575A base. Recommended replacement for 575A in older equipment. For new equipment design, the 6693 is recommended.	7136
-	+20 to +60°	Mercury-vapor half-wave rectifier similar to 872-A characteristics; with heavy long pin industrial base. Used by armed services and in commercial applications. Convection cooled.	8008-AX
-	-	Half-wave, high vacuum rectifier with high inverse voltage and low average current. Used in radar and precipitator power supplies.	8020-AX

### NOTES:

<sup>1</sup>Tube can be operated with external stabilizing cavity, in which case frequency is  $9310 \pm 1$  mc/sec.

<sup>2</sup>Tunable type, mechanical tuning.

Condensed Mercury Temp. Range - °C	DESCRIPTION	TYPE NO.
-	High control ratio, temperature independent Thyratron with high circuit sensitivity. Inert gas filled. Negative control characteristics.	2D21
+40° to +80°	Radiation-cooled mercury-vapor thyratron-tetrode.	AX-105
+35° to +75°	Heavy-duty, mercury vapor thyratron for motor control and A.C. welder control.	AX-255
+35° to +75°	Heavy-duty, mercury vapor thyratron for motor control and A.C. welder control.	AX-260
+25° to +50°	Negative-control, H.V. mercury vapor tube. Especially suitable for relay uses where current flow is desired in absence of grid excitation.	678
+30° to +80°	Radiation-cooled mercury-vapor low voltage thyratron. Similar in structure to 866-A.	1701
-	Xenon filled thyratron with reliable operation over wide temperature range. For electronic control of D.C. motor speed, regulation of current and voltage, counting and sorting devices and electronic switching machines.	5544
-	Same as for type 5544 above.	5545
+40° to +75°	Indirectly heated, mercury-vapor triode with negative control characteristics.	5559
+40° to +80°	Four electrode, mercury vapor thyratron with negative control characteristics. Designed for applications where the available grid power is very small and where it is desired to actuate the grid from a high impedance source.	5560/FG95
-	Grid-control, Xenon thyratron. Tantalum anode provides good heat dissipation and gettering properties.	5685/C6J
-	Ruggedized version of 2D21. Particularly suitable for mobile and aircraft operation where mechanical strength and reliability are important. Designed for relay, servo control applications, etc.	5727
+25° to +55°	Radiation-cooled mercury-vapor thyratron. Oxide coated filament. Used for stepless control of voltage output and D-C motor control.	5869/AGR-9950
+30° to +45°	Same as above for type 5869/AGR-9950.	5870/AGR-9951
+25° to +55°	High voltage, grid controlled mercury vapor thyratron. For industrial RF generators and transmitting equipment.	6786

Starting Filament		DESCRIPTION
(Volts)	(Amps)	
6.3	0.6	<p>The Amperex family of magnetrons operate in the VUHF frequency bands ranging from 2700 to 9405 mc/sec. at peak power levels ranging from 0.5 kw to 800 kw. Designed for radar application but also suitable in applications requiring short pulses of R.F. power of high intensity. Detailed data sheets for each of the magnetrons shown are available on request.</p>

Capacitances in $\mu\mu\text{f}$			DESCRIPTION	TYPE NO.
G-P	Input	Output		
0.06	5.4	3.4	Radiation-cooled triode, button type base, indirectly heated cathode. For use as amplifier and mixer up to 500 mc. Ideally suited for UHF television, balloon sondes, measuring equipment, etc.	6Q4/EC80
1.5	1.7	0.5	Radiation-cooled triode, standard button base, indirectly heated cathode. Used as oscillator up to 1200 mc. High efficiency at high frequencies.	6R4/EC81
-	$\leq 0.5$	-	Disc-seal, vacuum diode for UHF voltmeters and monitoring devices. Anode pin connection adaptable for use as probe contact.	EA52
0.004	9.2	6	Secondary emission pentode for wide band amplifier application where stability and high ratio of transconductance to capacities is important. Used in high speed computer service and high quality TV applications.	EFP60
1.6	3.3	0.04	Disc-seal triode, indirectly heated. Features "L" type, high emission, long life cathode. For frequencies up to 4000 mc. General purpose, low level amplifier.	DX144
1.6	3.3	0.04	Same as DX144 except higher current rating	DX145
0.05	7.0	2.5	High-gain miniature pentode with high figure of merit. For broad-band applications. Plug-in replacement for Western Electric 404A.	5847
will be ly 5.75 mA.			Dual control heptode for use as gated amplifier in computer and "on-off" control circuits. Direct replacement for 5915A.	E91H/6687

OPERATION				DESCRIPTION	TYPE NO.
Electronic * Tuning (KC/sec./volt)	Temp. Coefficient (mc/sec./°C)	Pulling Figure (mc/sec.)	Output Connector		
10	0.2	10	Waveguide RG-52U	The quietest, CW, high-power microwave generators available on the market. Microphonic effects are orders of magnitude less than in comparable tubes using flexible diaphragms as a part of the resonant circuit. Feature high power output, excellent frequency stability, very low microphonics and rugged construction. Require no mechanical adjustment, are simple to operate, easily modulated AM or FM and have minimum life expectancy of 1000 hours due to use of a new, impregnated cathode. No instruments required to align the tubes or to peak the operation. Tubes deliver rated output at rated frequency on application of potentials. Base connections are made directly on stem pins. Water-cooled (approx. 1/2 gal. per minute.) Size - approx. 7-1/2 x 4-5/8 x 2 inches.	DX-122
7.5	0.2	10	Waveguide RG-52U		DX-123
5.0	0.2	10	Waveguide RG-52U		DX-124

indicated; tolerance  $\pm 20$  mc. \*Tube may also be grid modulated, AM or FM.

VC250/32	250	32	60	3.7	VC250/32

**NOTE:** All metal parts of Amperex fixed vacuum capacitors are OFHC (oxygen free high conductivity) copper.

The above condensers should not be confused with old style vacuum condensers of nickel construction which results in high R-F losses, high temperature co-efficient, seal puncture and low voltage breakdown.

Amperex vacuum capacitors employ large elements with glass to copper seals. This results in low temperature co-efficient, low R-F losses and low inductance.

Maximum current ratings of Amperex vacuum condensers are based on a maximum glass to metal seal temperature of 180°C. The internal condenser losses are largely ohmic, I<sup>2</sup>R, losses and decrease as the frequency decreases; therefore the maximum RMS current ratings (ie; VC100) increases from 40 amperes at 40 mc to 70 amperes at 5 mc.

Capacitors identified with \* (asterisk) have a capacity tolerance of  $\pm 1$  mmfd. All other capacitors have a tolerance of  $\pm 2\%$  of rated value.

## VOLTAGE REFERENCE AND REGULATOR TUBES

TYPE NO.	Operating Voltage (Approx.) Volts	Operating Voltage Limits Volts	Recommended Quiescent Current Milliamperes	Ignition Voltage <sup>②</sup> Volts	Internal Resistance Max. Ohms	Current Range Milliamperes	Regulation <sup>③</sup> Max. Volts

‡ These ignitrons are partially insulated to reduce, as far as practicable, the possibility of accidental electric shock.

¶ These tubes are identical with the corresponding types 5551, 5552 and 5553 except that they are fitted with a "sensing" plate for adaption of a thermostat. They do not include the thermostat or thermostat mounting under these designations. If thermostatic control is required one of the following accessory groups should be ordered with each tube:

(A) AMPEREX "Water Saver" Thermostat Assembly, Cat. No. S-17024 (Consists of Thermostat No. C 4391-7-51, mounting clamp, terminal block and four sets of nuts, bolts and washers)

(B) AMPEREX "Overload Protection" Thermostat Assembly, Cat. No. S-17025. (Consists of Thermostat No. C 4391-7-52, mounting clamp, terminal block and four sets of nuts, bolts and washers)

Notes:

1. Non-RETMA numbers. Diode types meet electrical specifications as shown.
2. Both minimum and maximum limits are listed on detailed specifications. Characteristics are also specified at 60°C.
3. These values tested at 75°C.
4. Shunt capacitance for all types = 1.0 mmf maximum.

\* Hermetically, glass-fusion sealed, using vacuum tube techniques.

\*\* Hermetically sealed, metal case.

NOTE: All values are average unless otherwise stated.

DESCRIPTION	TYPE NO.
Tuning indicator featuring double sensitivity, clear indication even with weak signals	EM34
Tuning indicator especially designed for battery operated sets featuring low filament consumption (25mA), subminiature size and "on-off" indication. Ideal for transistorized computers	DM70/IM3
9 pin miniature tuning indicator featuring small size, ease of installation and high sensitivity for weak signals	EM80
Same as EM80 except for different fluorescent pattern. Suitable for radios, tape recorders and measuring equipment. Pattern makes it useful also as a level indicator.	EM81
9 pin miniature tuning indicator for use in broadcast receivers and tape recorders. The deflection electrode is connected separately to a pin at the base. Converging dual fluorescent bar pattern.	EM84
counter with luminescent spot at numbers on face 0 to 9. Max. counting counters, control and memory applications.	EIT/6370*
Subminiature vacuum triode with fluorescent anode. Designed for electronic computer and business machine applications to replace neon lamps. Particularly suited to use in transistorized circuits. Designed for 20,000 hour life.	6977

<sup>1</sup> Airflow Chamber S-3705

<sup>2</sup> Airflow Chamber S-3740

<sup>3</sup> Airflow Chamber S-11882

<sup>4</sup> Supplied with each tube without charge

<sup>5</sup> Key for water jacket, S-13209

<sup>a</sup> Water Jacket mounting clamp S-17463  
Water Jacket mounting plate S-17464

<sup>7</sup> Airflow Chamber S-3705

<sup>a</sup> Airflow Chamber S-19489

<sup>a</sup> Filament center pin connector

<sup>10</sup> For use up to 30 Mc.

<sup>11</sup> For use above 30 Mc.

\* Includes screen by-pass condenser and air system chimney.

## NOTES

## THE AMPEREX PLANT AT HICKSVILLE, L. I., NEW YORK

In line with the growth, complexity and new applications of electronics, The AMPEREX ELECTRONIC CORP. research laboratories are continuously improving existing tubes and developing new types.

Facilities for research and study of glass technology, metallurgy, chemistry, physics of gases, radiation detection, high voltage phenomena, etc. are utilized for the purpose of incorporating these tube improvements.

A modern, well-equipped Application Engineering Department is also available for the assistance of our customers who are concerned with circuit and application problems relating to tubes.

The latest production techniques and "know-how" are applied to the manufacture of AMPEREX tubes which, for over 30 years, have achieved a reputation for reliability of performance and long life.
